

PALM & GRACE MEMORIALS

Complete Project Testing Guide

End-to-end checks for the public website, memorial experience, admin portal, enquiries, media and production integrations.

Public experience

Homepage, directory, story, navigation, forms and mobile UX.

Memorial journey

Male, Female and Child templates, Chronicle, media and memories.

Priority: sharing

Public link, admin copy action, QR download, phone scan and privacy.

Where to test

WEBSITE <https://palm-grace-web.vercel.app/>

ADMIN <https://palm-grace-web.vercel.app/admin/login>

API HEALTH <https://palm-grace.onrender.com/api/health>

Safety first: Use dedicated sample memorials and approved test inboxes. Never publish real family details for testing, share a draft QR, or put credentials in screenshots.

Pass / fail evidence

Record each check as Pass, Fail or Not applicable. For failures capture page URL, memorial slug/template, device width, time, screenshot and relevant browser Console/Network response. Local test success does not prove a change is live.

START HERE

Set up a safe test journey

Follow one disposable memorial from Draft to Private Preview to Published, then back to Draft. Keep real memorials untouched.

What testers need

- Desktop browser and a phone.
- Admin credentials supplied privately.
- Male, Female and Child sample memorials.
- One long and one short Life Story.
- Sample photo, video and optional stream URL.
- Access to approved family and partner inboxes.

Release readiness

- Latest Vercel frontend is Ready.
- Latest Render API is Live.
- `/api/health` responds successfully.
- Render reports PostgreSQL connected.
- Brevo and Cloudinary are configured.
- `PUBLIC_SITE_URL` matches the intended website origin.

Run local automated checks

```
npm run lint --workspace apps/web
npm run build --workspace apps/web
npm run test --workspace apps/api
npm run build --workspace apps/api
npm run prisma:validate --workspace apps/api
```

Run from repository root. Do not alter production data or run a migration solely for this test.

Responsive test matrix

Size	Focus	Result
1440 x 900	Full heroes, sections and admin actions	—
768 x 1024	Tablet navigation, galleries and cards	—
390 x 844	Mobile menu, portrait, forms and QR modal	—
320 x 568	No cropped text, overlap or horizontal scroll	—

PUBLIC ACCEPTANCE

Pages, directory and mobile UX

Homepage - /

- ☐ Full opening image and “Honouring Lives. Preserving Legacies.” are visible and readable.
- ☐ Primary/secondary buttons work; “Scroll to explore” is visible before scrolling.
- ☐ Meaning and remembrance lead before technical features; cards have soft corners.
- ☐ Actual supplied logo remains clear in header/footer without a rounded logo border.

Our Story

- Explains Palm & Grace, stories and guided family care.
- “Begin a Memorial” works.
- Centered “Discover Our Care Partners” button works.
- Contact email appears only if configured.

Our Care Partners

- Explains funeral home and bereavement relationships.
- “Explore a Partnership” opens its separate enquiry form.
- Family fields are not mixed into partner form.

Memorial directory - /memorials

- 1 Open from homepage; cards begin loading without an unnecessary delay.
- 2 Search by name; results filter without a request on each keystroke.
- 3 Try Male, Female and Child filters, empty result and a card link.
- 4 Network should show `/api/memorials?summary=1`; it omits Life Stories and full galleries while retaining card counts.
- 5 Compare first cold Render load with a warm repeat; record both timings.

Every public page

- ☐ Navigation, search, mobile menu and footer links work; public footer has no admin link.
- ☐ At 320 px, logo and menu do not collide; no horizontal overflow.
- ☐ Keyboard focus is visible and reduced-motion preference is respected.

THREE TEMPLATES

Arrival to reflection

Opening - test Male, Female and Child

- ☐ At desktop and mobile sizes, hero and “Scroll to remember” fit the initial screen.
- ☐ Scroll prompt uses the same outlined arrow styling as the homepage.
- ☐ Portrait is prominent and centered; name, enabled dates and “Who They Were” sit beneath.
- ☐ “In Loving Memory” sits at the photo-frame base without overlapping text.
- ☐ Each template has a distinct background; Child portrait is not reused as backdrop.
- ☐ Female page is warmer/brighter; child design has no forced religious or clichéd imagery.

The Chronicle

1. Open long Life Story; only a preview shows initially.
2. Select Read More; all paragraphs appear.
3. Select Read Less; preview returns.
4. Short Life Story has no unnecessary expand control.

Content below

- Tributes, service details and photo/video gallery show directly on the page.
- Livestream and recording appear only if URLs exist.
- No stream means no empty panel; other content reflows.
- Closing words conclude the page when provided.

Optional / privacy matrix

Scenario	Expected result
Few photos, short story	Complete and dignified layout; no empty placeholders.
Hidden birth/death date	Hidden date absent publicly and in directory.
No service or video	Absent sections disappear cleanly.
Pending or declined tribute	Never public; private contributor email never visible.

SHARE WITH CONFIDENCE

Public link, sharing and QR

Release-critical: Copied URL, public Share action and scanned QR must resolve to the same canonical memorial. Draft, Private Preview and Archived records must not expose the public page.

Admin-to-phone test

- 1 Sign in at /admin/login. In /admin/memorials, find labelled **Share / QR** in the sample row.
- 2 Open its saved editor; find the same Share / QR control. A new unsaved memorial has no link yet.
- 3 Open modal: verify person's name, slug, status, QR preview and full public URL.
- 4 Copy and paste the link. Format: `https://palm-grace-web.vercel.app/memorial/{slug}` or approved custom domain.
- 5 Download SVG and PNG; open both to ensure they contain a readable QR, not a 401/error document. Check print preview.
- 6 Publish and save the sample. Open copied URL in a private window; scan QR with a phone. Both open the same person.
- 7 Use the public page's Share control and confirm it points to that same URL.
- 8 Unpublish to Draft. Old URL and QR must no longer expose memorial content.

Pass: published

Copy works; public page opens; phone scan matches; SVG, PNG and print are usable; public Share points to the canonical link.

Pass: private

Admin can prepare draft/preview QR, but public page remains inaccessible until publication. Archived stays unavailable.

If this fails

Check Render `PUBLIC_SITE_URL`, saved publication status, admin session, Vercel `/api/*` proxy and Network response from `/api/admin/memorials/{id}/qr`. Do not distribute a QR until a real phone scan succeeds.

PROTECTED WORKFLOWS

Admin, media, tributes and forms

Authentication and editor

- ☐ Signed-out /admin redirects to login; wrong password is rejected; correct login works; logout protects admin pages.
- ☐ Dashboard counts/navigation work; password eye icon and mobile admin layout are usable.
- ☐ On disposable sample, save preferred name, dates/show-hide, line, Life Story, service/wake, stream/recording, acknowledgement, closing words and template.
- ☐ Preview privately, then test Draft, Private Preview, Published and Archived; verify public visibility after each save.
- ☐ Upload photo/video via Cloudinary, reorder gallery, remove only a sample file and confirm public order.

Tribute moderation

- 1 Submit a unique sample memory on a published memorial; success says pending review.
- 2 Before approval, memory is not public. Admin sees it under Pending Review.
- 3 Approve and refresh public page; memory appears. Decline another test memory; it remains hidden.
- 4 Contributor email, if provided, stays private to admin and never appears in public API/page.

Two separate enquiries

Begin a Memorial

Validate required fields and invalid email; send one clearly labelled TEST enquiry. Gentle success message appears and the configured family inbox receives the branded email.

Care Partner

Check organisation, contact, role, location and enquiry fields. Send one TEST enquiry; the configured partner inbox receives it separately.

If a form returns 503: inspect Render destination-email variables, Brevo API key/verified sender and delivery logs. An error must not be shown as success. Avoid rate-limit testing on the live client inbox.

RELEASE DECISION

Reliability and evidence

Production integrations

Area	Verify
Vercel + Render	Direct memorial URL refresh works; same-origin API proxy works without CORS/401/503.
PostgreSQL	Saved sample survives refresh and redeploy; Render logs show connection.
Cloudinary	Upload/signature works; photo and video load; no secret in public response.
Brevo	Verified sender, separate family/partner destinations, accessible email logo; no secret in screenshots.
Performance	Record cold/warm directory timings; search has no repeated full requests; no broken images.
Accessibility	Keyboard, focus, readable contrast, mobile and reduced-motion pass.

Release gates

Area	Pass criterion	Result
Public pages	Routes, copy, logo, links and mobile navigation	___
Memorials	Three templates, optional content, Chronicle, media	___
QR + sharing	Copied URL, phone scan, downloads and privacy	___
Admin	Auth, editor, statuses, media and moderation	___
Enquiries	Distinct forms and delivery to correct inboxes	___
Operations	Health, database, proxy, builds and tests	___

Failure report

URL / memorial slug: _____

Device / viewport / time: _____

Steps and expected vs actual: _____

Screenshot and Console/Network response: _____

Sign-off rule: Latest Vercel and Render releases are live, all release gates pass on real devices, and QR/public link has been scanned with a phone. Automated tests alone are not live-site acceptance.
